THE FOOD

LASER SOCKS!
1. Two players compete to get their feet across the laser beams.
2. The player who gets their feet across the laser beams first wins.
3. The player who gets their feet across the laser beams last loses.

The Problem:

- Powerful real-time 3D solid model graphics machines.
- No direct manipulation even in 2D.

got married, she leaped up to help with serving the food, and when she was up afterwards, she got up, offended, and said, "Mummy, how can I be cleaning?" She ended every sentence she spoke to his uncles with "sir." She had a fair of his cousins' daughters. There was something immodest about her that announced itself

Now she was curtseying and greeting Mrs. Akin-Cole, a famously old family, who had the supercilious expression, eyebrows and person used to receiving homage; Obinze often imagined her belching champagne.

"How is your child? Has she started school?" Mrs. Akin-Cole asked. "Yes, she's at the French school. They are very good, very rigorous. Of course they teach English at home. They can only be good for the child to learn another civilized language, since English at home."

"Okay, ma. I'll look at the French school," Kosi said.

"The French school is not bad, but I prefer Sidcot Hall. They teach a better curriculum," said another woman, whose name Obinze had forgotten. He knew she had a lot of money during General Abacha's government. She had been a pimp, providing young girls for the army officers who, in turn, gave her inflated money. Now, in her tight sequined dress that outlined the swell of her lower belly, she was a certain kind of middle-aged Lagos woman, dried up by disappointment and bitterness, the sprinkle of pimples on her forehead smothered in heavy foundation.

"Oh, yes, Sidcot Hall," Kosi said. "It's already on top of my list because of the British curriculum."

Obinze had not really not have said anything at all, just watched and listened for some time. "Didn't we all go to primary schools that taught the British curriculum?"

Their puzzled expressions implied that he could not be serious. It was not. Of course he, too, wanted the best for his child. Some of the older men, an intruder in his new circle, of people who had been his father's friends, would ensure the wholeness of their children's education, too much time mourning what could have been.

When he spoke with moneyed children, he was always with moneyed children. He had cents, but he was not a cent. They could not be with moneyed children, a sad seat would not go to the French school.

"If you decide to do that, I'll be there," Kosi said. He had a baked Nigerian cake. He spoke with the woman once, of the French school, her British curriculum.

Hand and Digital
in Early Years

A large white board on a metal stand, displaying a grid of numerous small images and text blocks. The board is organized into several columns and rows. The content includes:

- Top Row:** Several columns with headers like "Introduction", "The System", "The Hardware", "The Software", "The Network", "The User Interface", "The Data", "The Results", "The Conclusion", and "References".
- Grid Content:** Each cell in the grid contains a small image or a short text snippet. The images appear to be related to a technical or scientific project, possibly involving hardware components, software interfaces, or data visualizations.
- Bottom Right:** A small orange sticky note is attached to the board.

A small white card or note pinned to the wooden pillar on the right side of the board.
